

**PARK in a TRUCK**

# **CREATE**

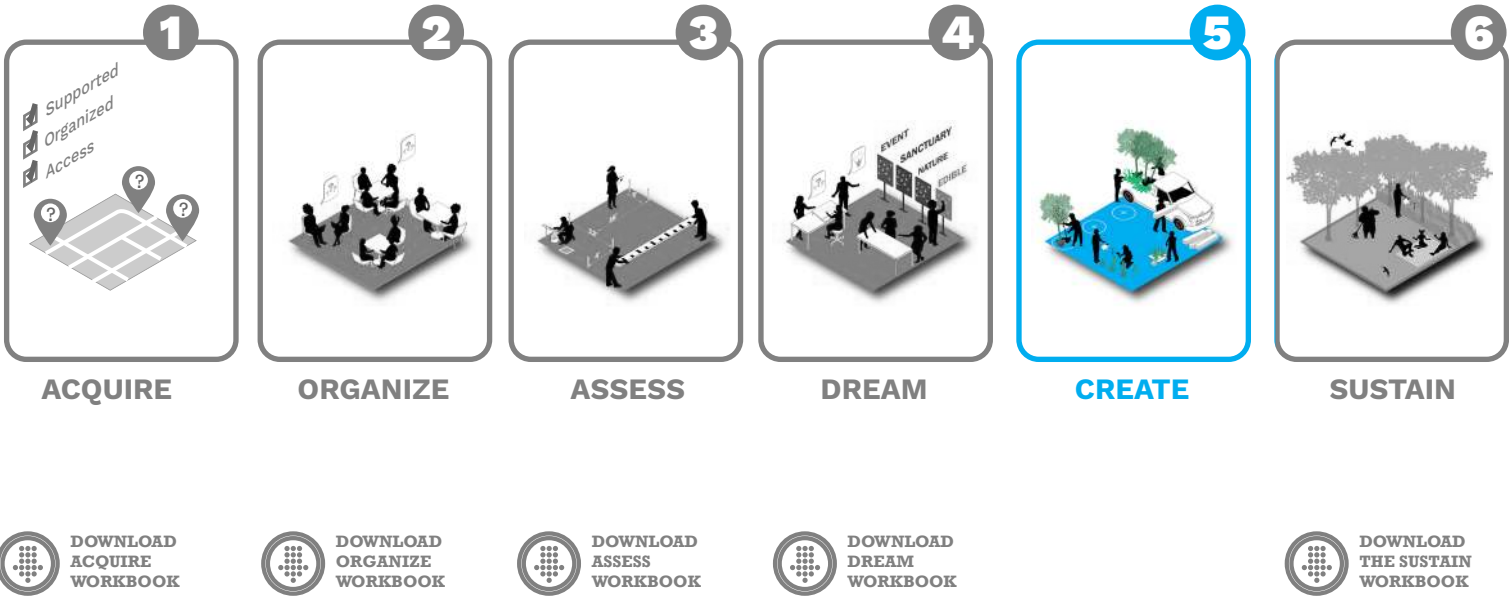

## **WORKBOOK**

A do-it-yourself toolkit for neighborhood parks

The Landscape Architecture Program +  
The Lab for Social and Urban Innovation  
Thomas Jefferson University  
Philadelphia, PA

Welcome to the Create Workbook! This book assumes you have reviewed the Park in a Truck Toolkit, and have completed workbooks 1-4.

CREATE CONTENTS

- OVERVIEW
- PHASE 1: ORGANIZE
  - PHASE 2: PREPARING LOT
  - PHASE 3: LAYOUT & GRAVEL BASE
  - PHASE 4: INSTALL EDGE
  - PHASE 5: SPREAD TOPSOIL
  - PHASE 6: PLANT
  - PHASE 7: INSTALL GRAVEL SURFACE
  - PHASE 8: INSTALL PARK ELEMENTS
- SUMMARY

This workbook details how to **plan, prepare and install** the elements for your park through a phased approach. This is a step by step overview to guide your planning and park installation. All your efforts to this point will pay off once you see your park, but there is still a lot of work to do. So get ready for the final push in getting your park CREATED!

# OVERVIEW

The Create chapter is all about building your park. We broke the process down into seven phases. Each phase can be completed in roughly a weekend. The size of the park and number of volunteers will impact how long the park will take to build.

These phases are ordered for a reason, and ensure successful park completion. Review the details for each of the eight phases and make adjustments to the schedule as necessary for your own particular park requirements.

This book assumes you have done the cost estimate tool and know the quantities and materials you will need to order for each step. If you haven't, please go back to the dream workbook to use the cost estimator.

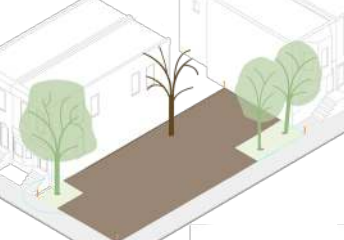

PHASE 1

ORGANIZE

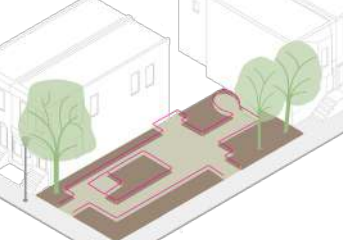

PHASE 2

PREPARE LOT

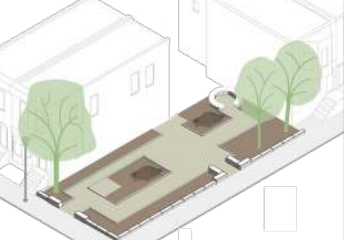

PHASE 3

LAYOUT & GRAVEL BASE

PHASE 4

INSTALL EDGE

PHASE 5

SPREAD TOPSOIL

PHASE 6

PLANT

PHASE 7

INSTALL GRAVEL SURFACE

PHASE 8

INSTALL PARK ELEMENTS

# ASSEMBLE YOUR TEAM

Make sure you have volunteer release forms available at the site when you're working on the park. The purpose of this form is to release you from liability for any injuries to your volunteers. It is your responsibility to consult with your organization's legal advisors and insurance carrier before starting the park building process. They may want you to take additional steps to protect the organization from liability. Finally, be sure to give your volunteers clear instructions about expectations and tasks for the work day. They are more likely to return in future weeks when they feel their time is put to good use. Volunteer release form can be found here:

# PHASE 1: ORGANIZE

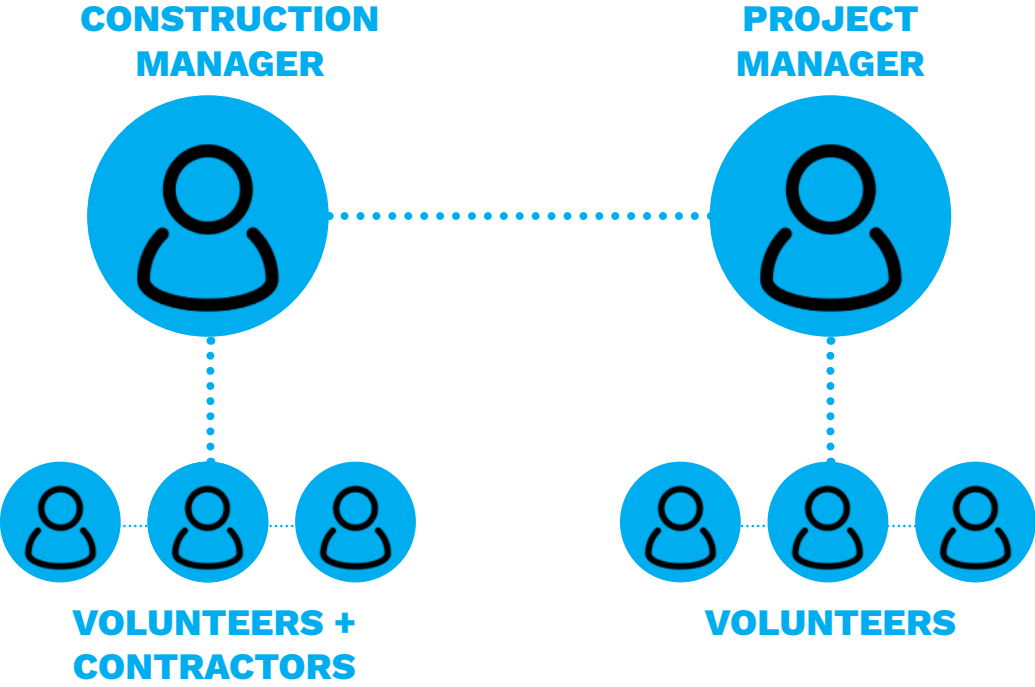

As in any process, the first and most important step to the CREATE process is to organize your team by identifying project leaders and establishing a schedule. The numbers of people assigned to these roles will depend on the complexity and size of your project. Below is a chart of the two key roles to ensuring your park gets built. The construction manager orders materials, is there for the delivery, gives instructions to volunteers on build days, and coordinates with the project manager on schedule. The Project Manager is in charge of getting volunteers, social media, ordering food, handing out waivers, coordinates finances and is in control of the schedule.

For construction planning, utilizing a project calendar is an excellent way to keep track of schedules, important dates, when people and volunteers will be working, as well as lead times for materials. Below is a sample project calendar, but you will need to customize this to your individual park project. Planning is as important as the building process itself. So start off on the right foot and make sure you are planning for the upcoming events.

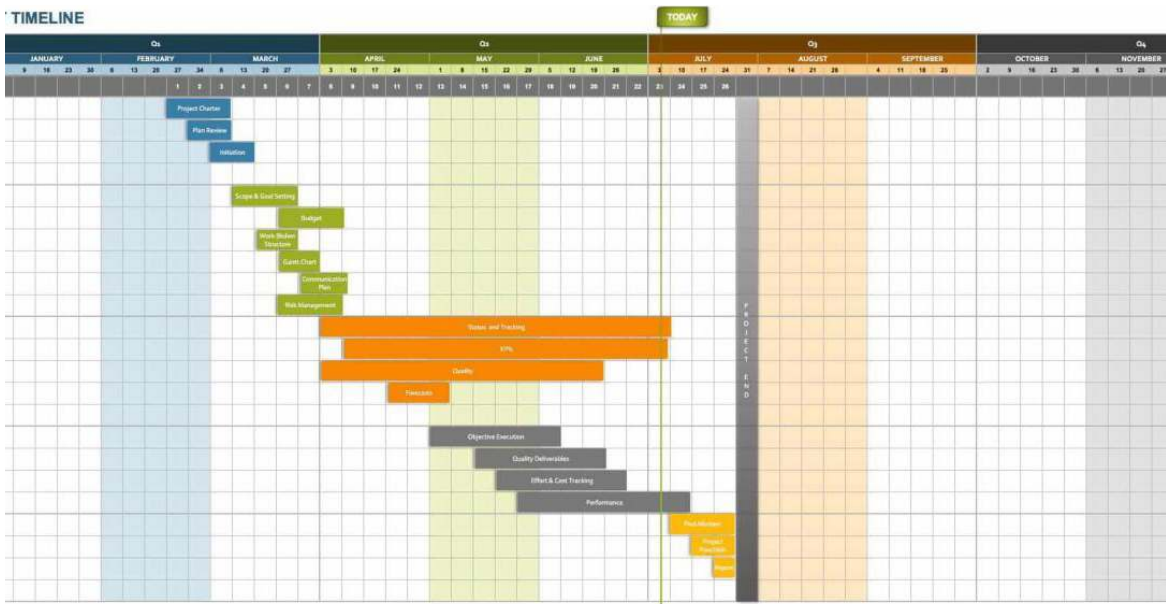

Click on the link below to get a sample calendar.

Note: For reference only

# PHASE 2: PREPARE LOT

## EQUIPMENT + TOOLS:

- |                                                 |                                               |
|-------------------------------------------------|-----------------------------------------------|
| <input type="checkbox"/> Shovels                | <input type="checkbox"/> Spray paint          |
| <input type="checkbox"/> Wheelbarrows           | <input type="checkbox"/> Construction fencing |
| <input type="checkbox"/> Pick axe               | <input type="checkbox"/> Wood posts           |
| <input type="checkbox"/> Grading rakes          | <input type="checkbox"/> Broom                |
| <input type="checkbox"/> Sledgehammer           | <input type="checkbox"/> Chainsaw             |
| <input type="checkbox"/> Hand pruners + Loppers | <input type="checkbox"/> Trash bags           |
| <input type="checkbox"/> Pruning saws           |                                               |

## OPTIONAL: (for sites with large amounts of uneven surfaces, concrete, or tree stumps)

- |                                                                       |
|-----------------------------------------------------------------------|
| <input type="checkbox"/> Excavator (hired contractor recommended)     |
| <input type="checkbox"/> Stump grinder (hired contractor recommended) |
| <input type="checkbox"/> Jack hammer                                  |
| <input type="checkbox"/> Rototiller                                   |
| <input type="checkbox"/> Herbicide spray                              |

## STEPS:

### STEP 1: EVALUATE

*Note: some sites require more clearing or grading than others, which require special machinery. Contact a landscape contractor if any of the following steps cannot be completed by the community alone.*

- Contact PIAT team ([parkinatruck@jefferson.edu](mailto:parkinatruck@jefferson.edu)) for site visit consultation if unsure how to prepare your site
- Contact Pennsylvania One-Call at 811 to mark utility locations

### STEP 2: PROTECT

- Bring small tools and equipment to site
- Set up protective construction fencing with wood posts at tree trunks, buildings, and other existing items that need protection
- Install silt/erosion control fencing around site and at all drain inlets

### STEP 3: REMOVAL

- Remove any unwanted vegetation (including roots), tree stumps, trash, and masonry materials
  - some vegetation removal maybe require herbicide treatment to control effectively in a timely matter. See useful links on page 11 for more details
- Prune existing trees to remove limbs from trunk to at least 6' high
- Haul debris and vegetation off site to proper dumping location
  - stockpile masonry materials on site to use as gabion basket fill

### STEP 4: SITE LEVELING

- Begin grade raking and leveling the site
- Make sure any Pennsylvania One-Call markings are still intact and visible
  - soil grade should be relatively level with sidewalk grade

TREE PRUNING:

Tree pruning [youtube.com/watch?v=pY5A-5gUqwo](https://www.youtube.com/watch?v=pY5A-5gUqwo)

WEED IDENTIFICATION:

Philadelphia Orchard Project: Weed ID Guide <https://www.phillyorchards.org/resources/>

HERBICIDES WITH ACTIVE INGREDIENT:  
*-use sparingly and always follow product label instructions*

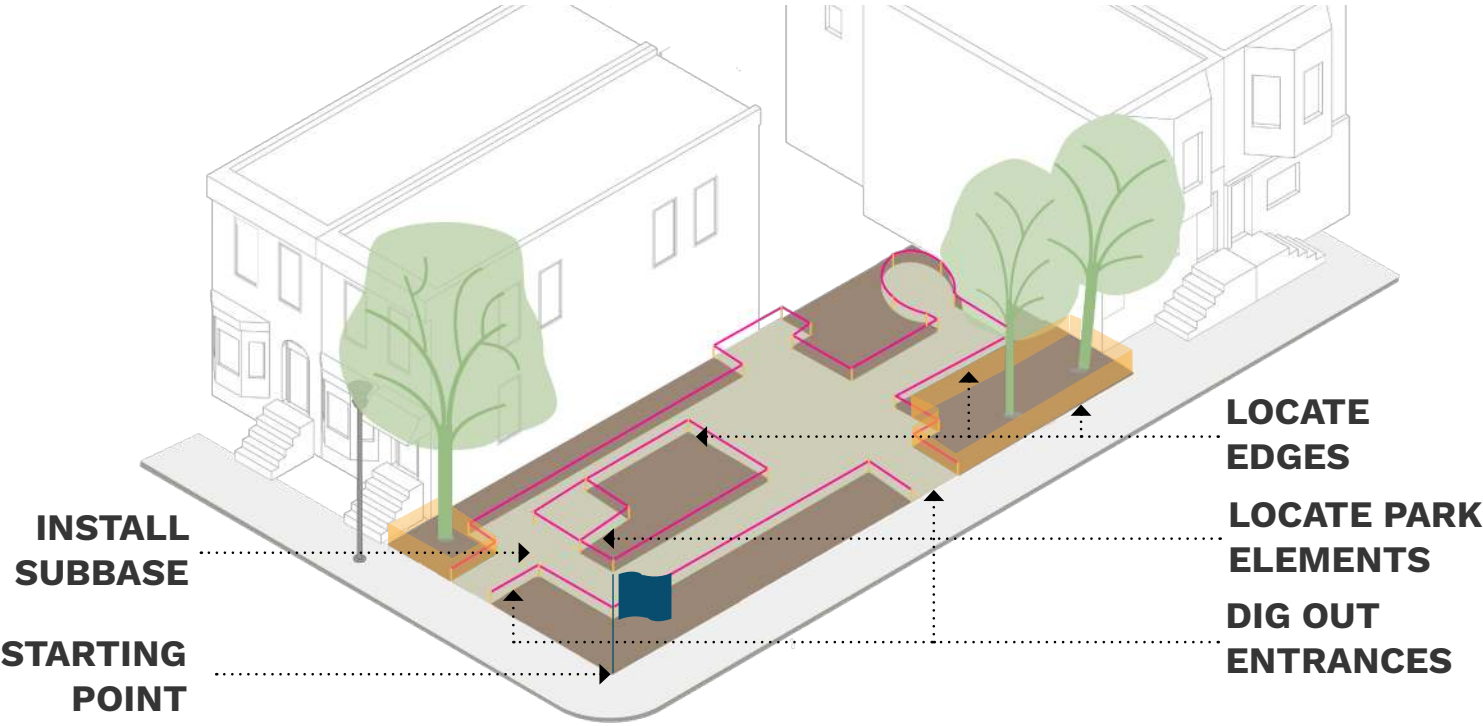

Picloram- for stump application on woody plants  
Glysophate- for foliar application on herbaceous and woody plants  
Clopyralid- for mugwort and Canadian thistle

INVASIVE WEEDS THAT OFTEN REQUIRE HERBICIDE CONTROL:

Herbaceous- Mugwort, Canadian thistle, Japanese knotweed, and Phragmites  
Woody Plants- Broussonetia, Ailanthus, Pawlonia, Japanese honeysuckles  
*-cut and treat stump, only if too large to remove by roots*

# PHASE 3: LAYOUT & GRAVEL BASE

## EQUIPMENT + TOOLS:

- ☐ Square
- ☐ Measuring tape
- ☐ Shovels
- ☐ Wheelbarrows
- ☐ Pick axe
- ☐ Grading rakes
- ☐ 5lb hammer
- ☐ Spray paint
- ☐ Wood posts and string
- ☐ Vibrating plate compactor
- ☐ Broom

## MATERIALS:

- ☐ Gravel (3/4" Roadbase)

## STEPS:

### STEP 1: MATERIALS

- Bring equipment and tools to site
- Prepare for deliveries of materials
- Locate stockpile area for gravel
- Cover the stockpiled soil with a tarp if possible
- To ensure the correct placement of materials, mark in spray paint the general areas to receive gravel. If there is not enough room coordinate the delivery with your city (see link below) to be placed in the street.
- <https://www.phila.gov/services/cars-parking-transportation/apply-for-a-parking-permit/apply-for-a-temporary-no-parking-permit/>

### STEP 2: LAYOUT PLANTING BEDS & PARK ELEMENT LOCATIONS

- Begin at your starting point you marked out in the Assess Workbook
- Refer to your plan for locations and lengths of edges of planting beds and park elements
- Use stakes and string line to mark locations of edging and park elements which you will add in future steps

### STEP 3: INSTALL SUB BASE

- Prepare ground surfaces for gabion baskets per assembly instructions
- Dig out entrances to allow for change in level from new park to sidewalk, minimum 4" deep at sidewalk edge and grading for
- Use excess soil to level out pathways or add to planting areas.
- Spread gravel 2" deep in all areas except plant beds
- Spread ~6" wider than string lines so that the edging in the next phase can sit on top of gravel
- Run vibrating plate over gravel at least 2 times

### STEP 4: ENTRANCES + CLEANUP

- Clean up areas with overspill of gravel
- Clean up public areas

PREPARATION FOR NEXT STEPS:

LOGISTICS:  
**Check project calendar to make sure you are on schedule.**  
**Revise schedule as needed.**

PURCHASES:  
**Purchase and deliver any materials and equipment that may have lead times in preparation for next phases of construction.**  
**NOTE: some roadbase gravel should be left over for next phase to set gabions. If not you can purchase more (2 bags per gabion).**

SITE PREPARATION:  
**Make sure site is prepared for the next phase of construction.**

# PHASE 4: INSTALL EDGES

## EQUIPMENT + TOOLS:

- ☐ Measuring tape
- ☐ Shovels
- ☐ Wheelbarrows
- ☐ Garden hoes
- ☐ Grading rakes
- ☐ Hand tamper
- ☐ Wire cutters
- ☐ Sledge hammer
- ☐ Level
- ☐ Broom

## MATERIALS:

- ☐ Gabion baskets
- ☐ Lumber and hardware for wood edge
- ☐ Large masonry material for gabion baskets, 3” or larger

## STEPS:

### STEP 1: MATERIALS

- Bring assorted edge materials (see materials list on page 16, cost estimate + Assembly instructions)
- Remove erosion protection fence, tree protection should remain or move if location interferes with edge installation.

### STEP 2: ASSEMBLE

- Assemble gabion baskets (refer to your Gabion Wall Assembly Instructions)

### STEP 3: INSTALLATION

- Set up string lines to make sure gabion baskets are in a straight line along the edge of the park
- Layout gabion baskets according to your plan, and fill bottoms with 2-3” of gravel
- Make small adjustments to ensure the gabion baskets are level and straight in relation to each other
  - When gabion baskets are used alone as tables or benches, use a leveling tool on top to make adjustments.
- Add Edges where needed (See Wood Edging Assembly Instructions)

# PHASE 6: PLANT

PLANT

## STEPS:

### STEP 1: PLANTS

- Remove any weeds that may have emerged
- Make sure plant deliveries are scheduled
- Locate plant delivery staging area
- Layout trees and shrubs in desired locations
- Clean up areas with overspill of soil
- Clean up public areas

### STEP 2: INSTALLATION

- Install large trees first
  - Reference plant detail on page 26
- Install shrubs
- Fine grade soil
- Plant perennials
- Install mulch 4"
- Water all plants thoroughly, and repeat 2x week until plants go dormant for winter

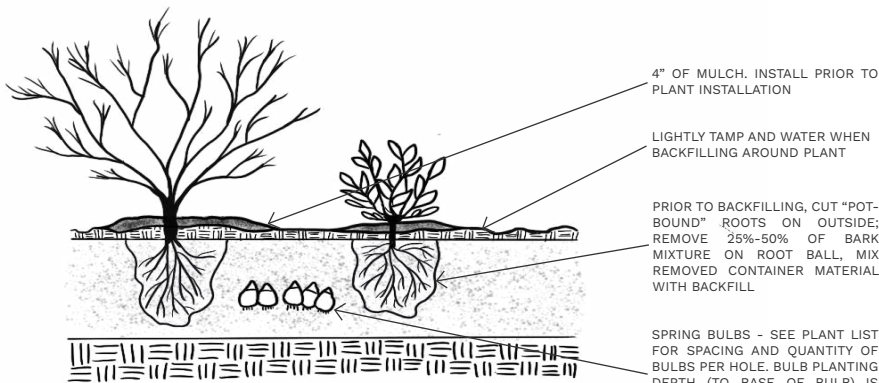

### EQUIPMENT + TOOLS:

- ☐ Measuring tape
- ☐ Shovels
- ☐ Wheelbarrows
- ☐ Pick axe
- ☐ Landscape rakes
- ☐ Spray paint
- ☐ Tree stakes and rope
- ☐ Broom

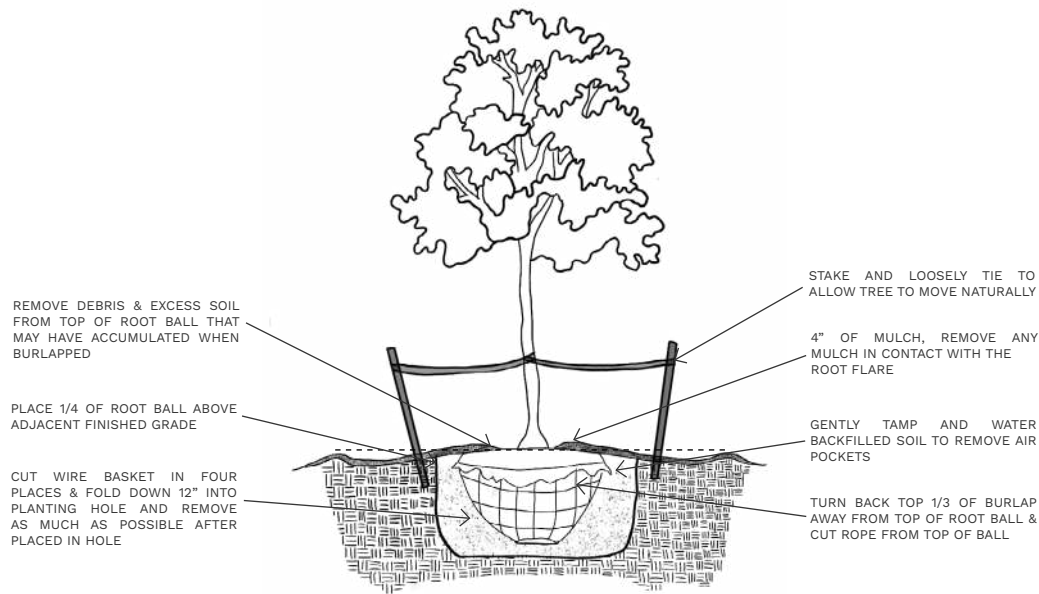

### MATERIALS:

- ☐ Plants
- Be sure to reference your plant list!**

# PHASE 7: INSTALL GRAVEL SURFACE

## STEPS:

### STEP 1: MATERIALS

- Prepare for deliveries of materials if not already stockpiled
- Locate stockpile area for gravel on sidewalk or street
- <https://www.phila.gov/services/cars-parking-transportation/apply-for-a-parking-permit/apply-for-a-temporary-no-parking-permit/>

### STEP 2: INSTALLATION

- Install gravel surface using a wheel barrow and a landscape rake
- Install gravel approximately 2” in depth, spread any excess gravel evenly
- Tamp down the aggregate material to reduce settling using a vibratory plate
- Move through all the areas to make sure the areas are level and even

### EQUIPMENT + TOOLS:

- ☐ Measuring tape
- ☐ Shovels
- ☐ Wheelbarrows
- ☐ Landscape rakes
- ☐ Hand tamper
- ☐ Vibratory plate
- ☐ Broom

### MATERIALS:

- ☐ Gravel (3/8” or smaller, stone dust)

### STEP 3: CLEAN UP

- Clean up areas with overspill of gravel
- Clean up public areas

REFERENCE PHOTOS:

Grading Rake

Hand tamper

Vibratory plate

# PHASE 8: INSTALL PARK ELEMENTS

PARK  
ELEMENTS

## STEPS:

### STEP 1: MEASURE

- Review your assemblies manual items and measure and mark out where your park elements need to be located

### STEP 2: MATERIALS

- Make sure you have all the materials outlined in your assemblies manuals

### STEP 3: ASSEMBLE

- Assemble your park elements according to the assemblies manuals

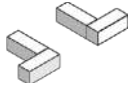

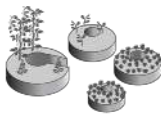

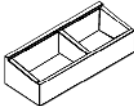

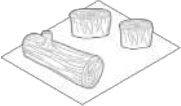

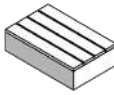

### STEP 4: INSTALL

- Make sure you have proper room within your park design to install the park elements. Locate these elements in their final locations
  - You may be able to/choose to assemble your park elements ahead of time or off site

FOR TOOLS AND MATERIALS, SEE ASSEMBLY INSTRUCTIONS ON THE NEXT FEW PAGES

ASSEMBLY INSTRUCTIONS

|                                                                                   |                    |                                                                                     |                              |
